Hello, I'm
Vinny Pereira
Senior engineer

MY JOB DESCRIPTION

I'm a Senior Engineer, working in systems engineering in the video games industry. I have over 17 years' experience working in IT & technology. I love gaming, arts, design & sports.

10 TIPS ON HOW TO FOLLOW IN MY FOOTSTEPS

Keep learning and studying:
Be it in your field of expertise, culture, or something you have a passing interest in. You'll be surprised how much can inform your designs.

Collect resources:
Every time you find a useful website or video online, bookmark and save it!

There are no bad questions:
Don't be afraid to ask a question if you don't understand something. I've found people usually want to help each other and raise everyone up.

Pace yourself:
It's easy to get caught up in something and forget to rest. Focus on one thing at a time, or you'll try to do too much and get nothing done.

Time management:
Be efficient with your time, and realistic with what you can do and when you can achieve a goal.

Don't let the setbacks on a project/task get you down:
Learn from them, grow, and become even more amazing at what you do.

Find a mentor if you can:
Someone either in your company, or circle of friends/family, who can help guide you and offer advice. Someone who can be honest with you in a constructive way.

Help others along the way:
One day you might become the mentor figure. Do the same for someone else coming up.

Build relationships:
Be respectful and collaborative with others and their ideas.

Be honest and straight up with people:
Especially when something hasn't gone the way you or someone expected on a project.
